

SYNOPSIS

❖ Project Title :- Electricity Billing System

❖ **Introduction :-** An Electricity Billing System is a software solution that automates the manual process of generating electricity bills, calculating units consumed, managing customer data, and processing payments, aiming to improve efficiency, accuracy, and convenience for both utility providers and consumers by reducing paperwork, saving time, and enabling online access. These systems track usage, store customer/billing details in databases, and provide features like online bill viewing/payment, error reduction, and better resource management for the electricity department.

❖ Objectives :-

- Automation of Bill Calculation
- Centralized Record Management
- Improved Security
- To generate monthly bills
- To generate reports

❖ Hardware Requirement :-

Processor	Intel inside CORE i3
RAM	Minimum 8 GB
Hard Disk	256 GB

❖ Software Requirement :-

Operating System	Windows 11
Developing Tool	IntelliJ IDEA
Front End	HTML,CSS and JavaScript
Back End	MySql

❖ Group Member :-

Sr.no	Name Of Student	Class	Roll No.	Signature
1	Dhanashri Vamdev Marathe	BCA-III	3454
